Portfolio: 18etolentino.github.io/evelintolentino.com

SUMMARY

Product Designer and Researcher bridging behavioral science, systems thinking, and human-centered design. Currently leading an active mixed-methods research study designing AI-assisted tools for underserved communities. Portfolio spans research-backed ecosystem redesigns, real client UX audits, and functional AI products. Incoming MIMS student at UC Berkeley with 4+ years of professional design experience and a foundation in architectural systems thinking. Bilingual English and Spanish.

EDUCATION

M.I.M.S., Information Management & Systems

Expected May 2028

UC Berkeley School of Information, Berkeley, CA

Focus: Human-Computer Interaction, UX Research, Information Architecture

B.S., Human Systems Engineering — User Experience Concentration

May 2026

Arizona State University, Tempe, AZGPA: 3.6 | Magna Cum Laude

Relevant Coursework: Human-Computer Interaction, UX Research Methods, Cognitive Engineering, Research Methods in the Behavioral Sciences

A.S. in Architecture; Architectural Design 1 & 2, Certificate of Achievement

May 2021

Orange Coast College, Costa Mesa, CAGPA: 3.57 | Top 10% of Class | Dean's List

2nd Place — 2020 AIA Orange County Student Design Competition (Gensler-sponsored)

SELECTED PROJECTS

Listo — AI-Assisted Legal Readiness App

2026 | In Progress

HSE 477 Human Systems Engineering Capstone | Arizona State University

- Led end-to-end product design for a mobile-first application serving undocumented immigrants, from problem framing through low-fidelity prototype, grounded in a published literature review synthesizing 10 peer-reviewed sources across migration psychology, information poverty, and AI ethics.
- Designed three core product features: an AI plain-language legal information interface reducing cognitive load for complex rights-based content, a community-vetted resource hub countering notario fraud, and an emergency preparedness system for high-stakes enforcement encounters.
- Conducted mixed-methods primary research in Spanish including a 7-section survey instrument, semi-structured interview guide, and think-aloud prototype walkthrough with community-based participants recruited through trusted immigration attorney and legal aid channels.
- Applied double diamond design process throughout: empathy interviews and literature-based user research to define information poverty as a design problem, ideation grounded in Fogg Behavior Model and cognitive load theory, and iterative prototype testing with vulnerable population ethics protocols.

SHEIN Circular Ecosystem Redesign

2025–2026

ASU UXP 365 Design Systems | Research Foundation: PSY 280

- Redesigned SHEIN's fast-fashion platform as a circular economy ecosystem, grounded in primary quantitative research (N=95, Pearson $r=-0.230$, $p=.025$) proving statistically significant inverse relationship between compulsive buying and subjective well-being.
- Applied behavioral economics frameworks including Fogg Behavior Model, hedonic adaptation theory, and prosocial warm glow research to shift the UX from impulse-triggering consumption patterns toward identity-based sustainability behaviors.
- Designed a full product ecosystem including Digital Product Passports (QR/NFC traceability), gamified milestone certification system with Bronze through Diamond rankings, ReCommerce trade-in hub, sustainability scoring system, and personalized digital closet dashboard.
- Produced UX scoring comparison across six sustainability dimensions demonstrating measurable improvement from baseline scores of 1–2 to redesigned scores of 3–4 across material sustainability, longevity, reparability, usability, emotional connection, and end-of-life impact.

Morehouse Crafted Interiors — UX Audit & Redesign

2025

ASU UXP 403 UX Writing | Real Client Project morehousecraftedinteriors.com

- Conducted a full heuristic evaluation of a live client website across Jakob Nielsen's 10 usability heuristics, rating 10 dimensions on a 0–4 severity scale and identifying critical issues in user control, error prevention, error recovery, and help documentation (scores 3–4).
- Developed a UX voice chart aligning brand principles (Academic Integrity, Function as Freedom, Radical Transparency) with user goals, then rewrote six key interface touchpoints including CTAs, form labels, error messages, and confirmation language to reduce anxiety and build trust.
- Produced a high-fidelity Figma prototype implementing all copy and visual hierarchy recommendations, standardizing typography, refining color palette, and restructuring the consultation booking flow to reduce friction and increase conversion confidence.

L'Oréal AI Routine Builder Chatbot

2025

ASU Global Tech Experience | Technical UX Project [ve708.github.io/FINAL09-prj-loreal-routine-builder](https://github.com/ve708/FINAL09-prj-loreal-routine-builder)

- Designed and developed a fully functional product-aware AI chatbot using real L'Oréal brand data from CeraVe, Garnier, and Lancôme, integrated with the OpenAI API to generate personalized skincare and beauty routines based on user-selected products.
- Implemented product search filtering, multi-turn conversation memory, localStorage persistence across sessions, and a Cloudflare Worker for secure API key management, demonstrating end-to-end technical UX execution from concept through deployment.

PROFESSIONAL EXPERIENCE

Freelance CAD Designer — Residential Interiors

Feb 2025 – Present

Independent Contract Work, Newport Beach, CA

- Manage 4–8 concurrent residential projects producing complete drawing packages from schematic design through trade-ready specification sets, maintaining zero-revision-cycle accuracy across simultaneous high-stakes deliverables.
- Collaborate directly with principal designers to review and refine drawing sets, translating complex design intent into precise contractor-ready documentation.

Project Coordinator

Dec 2023 – Feb 2025

Design Tec Inc., Newport Beach, CA

- Managed full project lifecycles for high-end residential developments, serving as primary liaison across architects, contractors, interior designers, and overseas production partners to align on design vision, timelines, and construction standards.
- Developed structured onboarding guides and led informal training sessions for team members, applying instructional design principles to reduce cognitive load and accelerate skill acquisition.
- Optimized workflow and documentation systems through process analysis, increasing team efficiency by 30% and reducing turnaround time by 20%.

Technical Designer — CAD

Aug 2022 – Dec 2023

Design Tec Inc., Newport Beach, CA

- Produced detailed AutoCAD construction documentation for luxury residential interiors including floor plans, elevations, millwork details, finish schedules, and material specifications for builder and contractor use.
- Identified recurring workflow inefficiencies through task analysis and implemented process improvements that reduced revision cycles and increased team productivity by 20%.

TECHNICAL SKILLS AND CERTIFICATIONS

Design Tools: Figma, Adobe XD, Adobe Illustrator, Photoshop, InDesign, Miro

Research Methods: Mixed-Methods Design, Usability Testing, Heuristic Evaluation, Semi-Structured Interviews, Survey Instrumentation, A/B Testing, Card Sorting, Think-Aloud Protocol, Journey Mapping, Persona Development

Technical: HTML, CSS, JavaScript, API Integration (OpenAI), Python (basic), GitHub, AutoCAD, Revit, Rhino, Grasshopper

Frameworks: Fogg Behavior Model, Cognitive Load Theory, Double Diamond, Nielsen's 10 Heuristics, Behavioral Economics, Information Architecture

Languages: English (native proficiency), Spanish (fluent — research and design conducted in Spanish)

Certifications: ASU Global Tech Verified: AI Skills, Web Development, AI-Powered JavaScript, Intercultural Skills
